ASPECT: RNA targets were provided by Region 6 and include Remedial Management Plan (RMP) locations, wastewater facilities, water treatment facilities, and National Priority List (NPL) sites. Flights collected aerial images over several hundred target sites. These targets have been arbitrarily categorized by the ASPECT team into geographic area designated by chronological zone numbers. Zone 1 is the southernmost geographic area and they extend northeast to Port Arthur. Figure 2 shows the current zones being surveyed today. Zones 5 & 6 are being flown because of their proximity to the Arkema site.

Need to know what air monitoring we have done as part of our hurricane response ? In particular in Harris county.

Need to know if ASPECT has flown in areas aside from ARKEMA to conduct air monitoring? If so where and what was noted.
